# LAB 2-2

1   Target:

Using video output and input on the embedded system.

2   Demonstration:

2.1   Show camera stream on the embedded screen.

2.2   Explain your code **in detail** to TAs.

2.3   Upload your source code to New E3.

2.4   Last date to demo: **Nov. 19<sup>th</sup>, 2020**.

3   Notes:

3.1   There are no instructions in this lab, you should be able to do this by modifying the work you have done.

3.2   We provide a non-completed source code for you to finish the important part only. However, it is not necessary to use the provided code. You could do this all by yourself.

3.3   The video shows on the screen **should be full screen**. Because the screen ratio is 10:6, it's ok to leave blank on two sides.

4   Hints:

4.1   If you are going to use OpenCV, the compilation command would be almost the same as the instructions in the last lab.
